

Questions to bring to your consultation

Write these down and take them with you. You will not remember them in the room.

1. Based on my specific medical history, which procedure do you recommend, and what's the reasoning?

2. How does my reflux history, if any, factor into that recommendation?

3. How does my diabetes or pre-diabetes status factor in?

4. What will my lifelong supplement requirements look like with each option?

5. What labs will I need, how often, and for how long?

6. How would my current medications be affected?

7. What are the complication rates for this procedure, in your hands, for patients like me?

8. What would revision look like later if it were ever needed?

9. Will this be done laparoscopically, robotically, or open, and why?

10. How many of these have you performed?
